

Before getting into the definition of the whole term Linear Isometry I feel it necessary to define each word by itself and then combine them. After that I will handle the topics and or issues the term shall deal with if any and then bring them into uniform focus as to there intended purpose.

For definition purposes I am using the Webster's II New Riverside Dictionary.

Linear-(Lin'e-ar) *adj* 1. Of, pertaining to, consisting of, or resembling a line. 2. Long and narrow.

With Isometry I shall start with two words Iso and metry and then combine them.

Iso-That which pertains to a similarity or close relationship. In this case an idealogic framework of thought.

Metry-(*suff*), is the Process or science of measuring in this case human progress and development across time.

Combined

Linear Isometry-The alignment of the full spectrum of cultures, creeds and peoples across our world around a framework of ideas, projects, missions, goals and hopes as a building and unifying effect for the whole of our civilization. Through the use of an innate ledger system to be developed we our civilization will also track extremely long term positive or negative gains with full adaptability for such gains.
