

Before getting into the definition of the whole term Nodal Point Reflectometry I feel it necessary to define each word by itself and then combine them. After that I will handle the topics and or issues the term shall deal with if any and then bring them into uniform focus as to there intended purpose.

For definition purposes I am using the Webster's II New Riverside Dictionary.

Nodal *adj* – 3. *Physics* A point or region of a vibrating or oscillating system where the amplitude of the vibration or oscillation is minimal.

Point – *n* 6. A definite moment in time. 7. An important or essential factor, part, or idea. 8. A purpose , objective, or reason. 9. Separate item element or detail. 10. A distinguishing quality or feature.

Reflectometry – in two parts and then combined.

Reflect – 1. To throw or bend back from a surface (or back to a source) 3. To manifest: reveal. 4. To think seriously: meditate.

Metry – the process or science of measuring.

Reflectometry – A measured approach to topics or issues important to a region, area, populace or culture whereby those topics or issues are given time to infiltrate and mature in a fashion endemic to that region, area, populace or culture aimed at minimizing stress through the fullness and understanding of the benefits or detractors of such topics or issues.

Combined

Nodal Point Reflectometry – A system where ideas, topics or issues are cast to a specific region, area, populace or culture for ultimate delineation as to social adherence for a specific

task, project, mission or goal inlayed and tied into a much larger social framework. This shall take into account the endemic social codifiers of that specific region, area, populace or culture. Thus, minimizing social stress and opening a window to a higher level of transparency about the will and needs of that specific region, area, populace or culture.
